- Black, no bead.....3108-B.....\$45.00 ea

1956 solid side glass has a right and left, it looks like the same but curve is slightly different, determine correct side before setting in lift channels. Upper and back window channels take a little coaxing into shape. If you are doing solid side windows the channels need to make a complete upside down U shape going all the way up, over and down both sides of glass. If you rush this process the stainless bead will crimp and separate from felt material. Don't try messing with original style clips, glue channels in at original clip points with weatherstrip glue. Lubricate felts with dry graphite, see previous page. See felt bending instructions on page 85
