

1953-55 SOLID SIDE WINDOW KIT

Felt with stainless bead

Some 1953-55 glass passes too far up into the outer corner, best solution for this is to split back of felt channel for about 5 inches in the corner, letting glass pass through slit when rolled all the way up.

1953-55 CURVED GLASS KIT

1953-55 doors have a slight curve, and upper hinge and adjoining sheet metal is in the way when eliminating vents. To install solid side windows you need kit with curved glass, OR you need to straighten glass opening. This can be done with our straighteners, but it's a lot of body work as you cut out inner angles along door glass opening and replace with straight pieces. This CURVED GLASS kit can be installed in a finished truck without all that body work as the only cutting is hidden behind door panel. Comes with instructions, upper & back felt runs, lower felts, and everything you need to install. Oversized shipping
