

INSULATION

INSULATION INFO: Many aluminum faced insulation instructions show the aluminum side facing the steel and the product used inside doors, this is misleading. The Shiny side should always be facing you, with the insulation material between it and the metal to form a barrier. Never use this type of insulation inside doors as it will retain moisture.

GLUE: We prefer high temp glue on most areas as summer surface temperatures on floor, roof and firewall can easily reach the normal 160° "release" temperature of standard glues.

HEAT SHIELD & INSULATOR

Aluminum laminated to 3/8" fiber tech padding, (do not use inside doors, is not water proof) precut kits are made from this material. Apply with high temp glue and seal all seams with aluminum tape. Usually need 3-4 rolls of insulation, 2 tape & 2 glue for complete cab

Single sided foil, 48" x 72" rolls..... 2167 \$25.00 rl
 Double sided, 48" x 72" 2167-AA \$32.00 rl

We often use this in headliner and underdash areas.

SELF ADHESIVE SOUND & HEAT DAMPER

Heat reflective, waterproof, mold-able. Good for any place that might get wet, inside doors, etc. High density, use in indents or sheet metal areas to dampen vibrations. Foil over mold-able rubber compound with aluminum on one side and self adhesive on the other.

Roll, 36" x 48" 45mm thick..... 2166 \$38.00 rl
 18" x 32" sheet..... 2166-D12 \$28.50 ea

OVERDONE MAT

Super dense self adhesive matting. This is stuff I like to go over all the sheet metal with, on top of indent fillers but under jute insulation. Super high adhesion, stick it down and heat it up, contours perfect, great for inside doors. Completely quiets cab, pop your knuckle on the metal after this and all you get is a satisfyingly dull thump.

Roll 36" x 48" 2166-B..... \$22.00 ea
 See precut kits as well, previous page and individual applications

FIBERGLASS MAT SELF ADHESIVE INSULATION

Bright foil side acts as temperature barrier, inner quarter inch fiberglass mat as sound deadener, fiberglass will not absorb water like fiber filled, self adhesive. Easy to install, best everywhere but heavy wear (smashing) area like floor. Layers stitched together making it easy to form, and cut.

40" x 96" roll..... 2168 \$32.50 rl

HI-TEMP SPRAY ADHESIVE

Holds at temps over 160°, most adhesive lets go at 160° so we use this at firewall, roof & floor. Does about two 4 x 6 rolls, or 48 sq ft

14oz 2103 \$14.95 ea

UPHOLSTERY ADHESIVE

Use for material to insulation, plastic, panel-board or steel
 WILL NOT SHIP VIA AIR

ALUMINUM TAPE 2101 \$4.95 rl

SEAM ROLLER 2101-RLR \$4.50 ea

PATTERN KIT

Cut the insulation out yourself with our patterns.

Lower cab, floor, rear wall & kicks B-2110 CALL
 Headliner 1953-55 and 1956 B-2116 \$15.00 ea

HORSE HAIR JUTE INSULATION 2132-JT \$19.95 rl

Yucky stuff but original, close to same matting as the 2167 with aluminum on one side. Used under floor mat originally 1/2" X 36" X 72"
