There is a very common, mind boggling, optical illusion that will confuse about 1/3 of the customers who order and receive our stock side window glass.

Here's what happens. You lay the 2 pieces of side window glass next to each other and one appears not to be cut correctly. See the below picture.

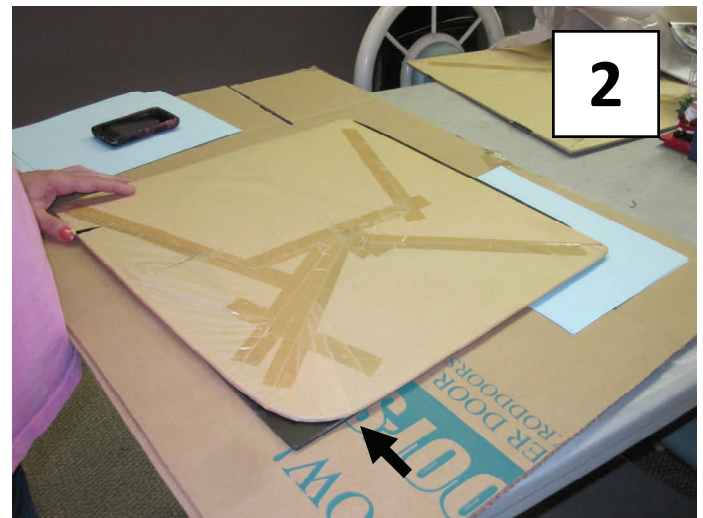

The arrow will be pointing at this same corner in every picture.

Like we said, this is a very common problem, but the glass is actually cut exactly the same. Follow the next couple of steps to flip the glass and you'll see that both pieces are cut just right.

1. Pick up the piece that appears to have the short corner and stand it on end with that corner pointing straight up in the air.

2. Bring that corner that is pointing up towards you and lay it face down.

3. Now put your left hand on the top left corner, and your right hand on the lower right corner.

4. Turn the glass 1/4 turn counter clock wise. (Take the lower right corner and make it the upper right corner. Take the upper left corner and make it the lower left corner.)

Done! Now everything is the correct size and cut. If there's still a problem give us a call, but 9.9 times out of 10 this fixes it!
