

IMPORTANT!

These plates are not pictured in other pages of the instructions for this kit, but are vital to keep your power windows functioning.

Your install kit (part# 1737) will also include 2 mounting plates (1 plate per door) that must be sandwiched between the motor and the hanger bar. This will stabilize the motor so that it does not twist, which would cause the plastic cable housing to flex and snap. Use of these plates is important. If the plastic housing snaps, the cable is unsupported, and the motor will be rendered useless.
