Seat belt mounting bracket is designed to be welded or bolted in place. Utilizes all of the strength of the upper cab for safety, going behind 2 points of reinforcement. It is recessed for use of ABS headliner or stock panelboard headliners as well as any other upholstery.

Install mount from bottom.

Push up into place behind door pillar inner lip and rear window inner lip.

Mark hole locations in door pillar & rear window lip if bolting in.

Double check and drill. (we recommend having your seat in place to ensure mount is in correct location)

If welding in, clamp into place & weld, using normal welding precautions.

*****Neither seat belts nor their mounts were original for these trucks. The user assumes that risk. The effectiveness of this equipment is directly related to the manner in which it is installed, used, and/or maintained. Proper installation is solely the responsibility of the installer, and will not be assumed by Mid Fifty F-100 Parts Inc.***
