**#!%@\* &# INSTRUCTIONS**  
**Mid Fifty F-100 Parts 1-800-252-**

Dropped Tube axles are wider than original Straight I Beam Axles, so the original upper spring tie plate is short, making the U-Bolts go down at an angle into the dropped axle spring seat. To solve this we have, **TIE PLATE FOR DROPPED AXLE** .....#2808 each

Dropped axles are the same front and back. They are ready for stock king pins. In some cases like when using Monos, the Spindle arm may need bent for clearance.

The tie rod requires dropping. Use special made **EXTENDED TIE ROD ENDS** .....#2718 pair

Mount Sway Bar with this axle bracket. . . #2845 each Replaces axle bracket in our, and most other, sway bar kits. Mount bracket as shown below, at 90 degree angle to spring pads.
