#@\$!*@#\$\$% INSTRUCTIONS

MID FIFTY F-100 PARTS 1-800-252-1956

To install the cover plate, determine the best location for drilling (4) screw holes. The access hole will be cut inside of the (4) holes. We recommend a 5" maximum diameter access hole to allow proper overlap for the cover plate. However, a smaller or non-circular hole may work best in your application. Drill 3/16" holes in the cover plate and 1/8" holes for the screws to install into. Pre-tap 1/8" drilled holes. A sealant may be used to prevent water from getting into the passenger compartment. Apply an anti-seize compound to the screws before final installation. If the plate is to be painted, prepare as you would any bare metal by properly sanding, cleaning, and priming.
